

APPLICATION DATA SHEET

Blackfast Australia Heating Mats

<u>SIZE</u>	<u>APPLICATION</u>	<u>POWER CONSUMPTION</u>	
355mm x 228mm	10/20 Litre tanks	38 watts	240 volts
355mm x 533mm	50/75/100 Litre tanks	90 watts	240 volts

The mat should be placed on a flat wooden surface directly under the Blackfast Degreasing & Blacking tanks. Do not fold or cut mat. The plug should be located well away from the tank where splashing can occur. It is recommended the mat be covered by additional polythene sheet as splashing on the cable entry could cause electrical shortage.

During the cold weather it is recommended that the mat remain on permanently with the lid on the tank when not in use to conserve heat and prevent evaporation. Power consumption is the same as that of a light bulb.

The optimum operating temperature of the blacking tank is 18- 25°C. If the temperature exceeds 25°C it is suggested that a dimmer switch be incorporated in the cable to control power input.
